

ABSTRACT OF THE DISCLOSURE

Disclosed is a language recognition apparatus having a storage with a stored vocabulary of words to be recognized for the language-based controlling of programs and/or other files. A word of the vocabulary is assigned to each program
5 and/or file. A link is stored in a file directory for each program or file, and the names of the links form a first active partial vocabulary of the language recognition apparatus. Also disclosed is methods of operating the language recognition apparatus including providing a language recognition apparatus, for example, as described above, and generating a current vocabulary containing at least the names
10 of the links from the file directory when a voice recognition program configured to perform voice recognition is started.
